

With the vertiginous increase in the use of information technologies, especially those related to the use of smartphones, the impact of the interruption of the 2020-2021 school year has not been so strong. Other people, those who do not have the conditions to enjoy the benefits derived from the infotechnological boom in the country are content, by force of necessity and lack of means, with any incentive, such as television or solidarity between parents and classmates who, at the stroke of a USB, disseminate or distribute instructions, tasks or teaching exercises. Taking advantage of the isolation at this time when the resurgence of the terrible pandemic that plagues us prevents the reincorporation of students to the teaching centers, forces us to draw strategies for teacher training, where the priority is the teleclasses for all students, and within them, always so necessary, the subjects of exact sciences. Taking this as a premise, having a correct basis in mathematics, formed from the early grades, ensures a happy outcome for all those who will always continue to use it, from carts or accountants to university professionals, as long as $2 + 2$ always gives 4, although for some it gives another result, which there are. Therefore, this time we present this application, which if you have a cell phone or tablet where to install it (you will see the requirements below), can help to create in your children, nephews or other school-age person a solid foundation in a subject so important and that will accompany us for the rest of life.

Mathematical Games: an application for all ages

In question is the application or app: Mathematical Games or Mathematical Children, framed in the category of Educational Games (free) and is rated as one of the best math games for children and adults. Implemented on the Android operating system, and that at least requires to have installed version 4.1, it is developed in several languages: English, Spanish, German, Italian, Portuguese, although we are only interested in Spanish and weighs approximately 10 megabytes. Different profiles can be created with customizable avatars, where the progress of each one is saved, which saves unpleasantness when at home there is only one cell phone and more than one child.

Features:

- Addition games
- Subtraction games
- Multiplication games and multiplication tables
- Division games and division tables

The games are so simple and easy that even the youngest children can play it. Rated as the best math practice game to train your brain, it is designed for all ages, including boys, girls and boys, adults, including parents and grandparents. It has simpler multiplication and division games that also includes addition and subtraction games. Math games can be: Educational Learning for kids (includes learning, practice, quiz, duel or games) or brain training application for adults. All basic and simple math game of addition, subtraction, multiplication and division with colorful worksheets. It is designed for all phones and tablets, as long as they use Android 4.1+, and no Internet connection is needed for it to run, not to mention that it also has audio. In itself, the tool is entertaining, but if the use of it incorporates the presence of an adult to guide or participate in the process, you will get even more out of it. You can also find it on Google Play, for free.
